A Clusters of single-fold proteins stay together
cumulative fraction of targets
smallest pairwise TM-score between a target's clusters
fold-switching pairs (n = 89)
Pfam-matched single-fold (n = 34)
disordered (DisProt) (n = 70)
random single-fold (n = 86)
B Spread does not follow sequence divergence
smallest pairwise TM-score
mean identity between the folded cluster representatives
